

Dear X Legal Team,

I am writing to formally request clarification regarding unexplained and unauthorized changes to my X account (@commonpace), which raise serious concerns about platform integrity, transparency, and potential data privacy violations.

Key Facts:

1. Unauthorized Verification:
 - In 2024, my account (@commonpace) was granted a verification checkmark without my application, payment, or notification.
 - This checkmark lacked a visible verification date—a discrepancy I observed only one other account share: @ModdedQuad, a Neuralink patient. Screenshots [here](#).
2. Context of Suspicion:
 - Prior to this incident, I had publicly/privately documented unusual physiological symptoms (e.g., auditory hallucinations, nerve shocks) on my X accounts
 - The timing and anomalous nature of the verification (including its removal after I questioned it) suggest either a platform error or intentional manipulation.

Formal Requests:

Per X's Terms of Service and applicable data protection laws (e.g., GDPR, CCPA), I demand the following:

1. Explanation: Who authorized the verification of my account, and under what criteria?
2. Technical Audit: Provide logs or records confirming how/why my checkmark was applied—and why its date was hidden.
3. Data Disclosure: Confirm whether my account activity or biometric data (if collected) was accessed, shared, or analyzed by X or third parties (e.g., Neuralink affiliates).

Legal Implications:

- If this was a glitch, X must clarify its verification protocols to prevent further breaches of user trust.
- If intentional, this constitutes potential misconduct (e.g., deceptive practices, privacy violations).

I expect a written response within 2 days. Failure to address these concerns may compel further legal or regulatory action.

Sincerely,

Robert Lyle Dalton III]
